DEFENDER, MIDFIELDER, GK

COACHING PHYLOSOPHY

“Sports have an element of science and an element of art. Teaching the science of soccer involves teaching the mechanics of the game from technique to tactics and the whole spectrum in between. Teaching the art of soccer involves mainly us coaches and adults to recognize our responsibility to provide the right environment and the freedom to our players to allow them to develop their own style and to be creative and make them feel that only their imagination is the limit as to what they can do in soccer. Teaching the science and art of soccer the right way will make our players enjoy the game, keep them motivated, and will allow them to form happy memories with team mates and coaches while developing their skills to the highest levels they can achieve”
